Live public screens + source-backed workflow overview

Let the product lead.

A focused collection gives customers a place to browse, compare, and choose without losing the character of the brand.

Merchandise the collection

Product photography, category links, price, and featured pieces establish a clear route into the catalog.

Make availability visible

Low-stock labels surface scarcity while customers browse. Stock synchronization needs its own transaction tests.

Keep the brand intact

A restrained dark interface gives colorful handmade products room to stand out.

Give each piece the detail it deserves.

Product photography, price, materials, care information, and visible availability support the buying decision.

A specific product record

The detail page connects the piece to its category, description, price, and supporting information.

A clear next action

Quantity controls and Add to Bag keep the purchase path close to the product.

Relevant discovery

Related pieces provide a route back into the collection without starting the search over.

Keep the next step understandable.

A cart drawer keeps the selected piece, quantity, subtotal, shipping note, and checkout entry together.

Review before checkout

The bag showed the selected product and subtotal after an Add to Bag action.

Edit the decision

The public cart supports quantity controls and removal. The sample item was removed after capture.

Separate intent from payment

A populated bag is not a paid order. No checkout session or payment was initiated for this showcase.

Give commissions a path of their own.

Made-to-order work needs a brief before it can become a product or a price.

Collect the idea

The public form asks for a name, email, description, budget selection, and reference images.

Turn interest into a brief

Structured intake can reduce scattered messages and give the maker useful context for a quote.

Keep the boundary clear

The form was inspected without submitting customer information or uploading reference files.

CHOOSE FILES

No file chosen

Upload up to 5 images for ideas, color direction, and details. Exact recreations may not be possible depending on available materials, scale, and stone placement.

Connect the buying journey to the work.

The reviewed source describes more than pages. These implementation paths were not verified through live transactions.

01

Catalog administration

Product editing, stock, categories, featured status, visibility, and media uploads.

02

Checkout + reservations

Stripe Hosted Checkout and stock reservations, with webhook handling for completed or expired sessions.

03

Order fulfillment

Paid-order records and fulfillment status administration behind authenticated access.

04

Commission handling

Request review, quoted amounts, payment-link storage, workshop status, and configured notifications.

05

Assisted product drafts

A photo-driven product import workflow supports draft catalog fields and images; review is still necessary.

06

Operational ownership

Catalog data, order state, media, and the operator workflow must remain understandable after handoff.

Source: jeweled-store README and checkout/webhook source at d502851. Source presence does not prove current hosted readiness.

A storefront today. A foundation to extend.

The current project represents one brand. A multi-vendor marketplace requires a separately designed operating model.

Observed in the public store

Homepage, catalog, product detail, shopping-bag addition and removal, and the custom-commission form.

Additional marketplace scope

Seller onboarding, moderation, commissions, payouts, disputes, and cross-seller fulfillment are not shown as existing features.

Source-backed, not live-tested

Payment webhooks, inventory reservations, fulfillment administration, notifications, and assisted product import.

No invented business results

No revenue, conversion uplift, sales volume, fulfillment performance, or customer savings are claimed.

Public capture: August 31, 2026. Product prices and availability are snapshots. No purchases, form submissions, or admin mutations were performed.

Build around the way you sell.

A distinctive storefront is the visible part. The useful system connects product information, purchasing intent, custom work, and the handoff to fulfillment.

Visit the live storefront

Discuss your commerce workflow

Keep what works. Simplify the buying journey. Connect the gaps. Build only what is missing.
